

# Distribution parity

The name of the establishment's rooms may be different depending on the OTA.

If the system is unable to determine the matches between the accommodations at the time of creation, this page allows you to "Map" the comparator, i.e. to match the detected rooms with each other so that your entire commercial offer is present on your website.

When you open the tab, you will only see the rooms without a match and the list of rooms detected when the website was created.

The screenshot shows a comparison interface with two columns:

- Unmatching rooms:** Contains two items: "Standard double room, terrace- hotels" (red bar) and "Standard double room with terrace- agoda" (purple bar). Each item has a "html" icon and a magnifying glass icon.
- Matching rooms:** Contains four items: "Standard double room with terrace", "Suite with terrace", "Standard double room with terrace & river view", and "2 adjacent double rooms". Each item has a "Show Images" button with a magnifying glass icon.

- Click on the room name to view the rooms automatically mapped during website generation.

This screenshot shows a detailed view for the selected room "Standard double room with terrace". It features a "Show Images" button at the top right. Below it, a list of unmatching rooms is shown, each with a red 'X' icon:

- Standard double room with terrace - booking (blue bar)
- Standard double room, terrace - hotels (red bar)
- Standard double room with terrace - agoda (purple bar)
- Double bed room - agoda (purple bar)
- Standard room with terrace (non refundable) - agoda (purple bar)

- Click on **Show images**  to view photos of the room, Check the room to Map
- Click on the corresponding room in the left column "Unmatched room". It will be inserted to the list of the selected room.
- Repeat the operation until all the rooms are mapped.
- If the correspondence of a room is not correct, click on   Junior suite with private pool and garden - booking
- If a room category of one of your distributors does not appear in the list, you can click on:

<b>Import rooms</b>	<b>Import rooms from Agoda</b>	<b>Import rooms from Hotels</b>	<b>Import rooms from Expedia</b>
---------------------	--------------------------------	---------------------------------	----------------------------------

The system will import the newly detected accommodations. All you have to do is make the correspondence.
